

SCENARIO

“

”

NAME	MATRIC NO	GROUP
IRDINA NADHIRAH BINTI BAHANUDDIN	22C18G026	2

PROBLEM:

Suresh has three brothers. He has 35 marbles, he took 7 from that, and the balance will be divide equally with his three brothers. How many marble that each brother got and how many marbles left.

SAMPLE OUTPUT:

Sample Output:

IPO CHART

INPUT	PROCESS	OUTPUT
People=3	Marbles_per_person=(35-7)/3	Marbles_per_person
Marbles=35	Balance=(35-7)%3	Balance

PSEUDOCODE:

Start

Read people=3

Read marbles=35

Marbles_per_person=(35-7)/3

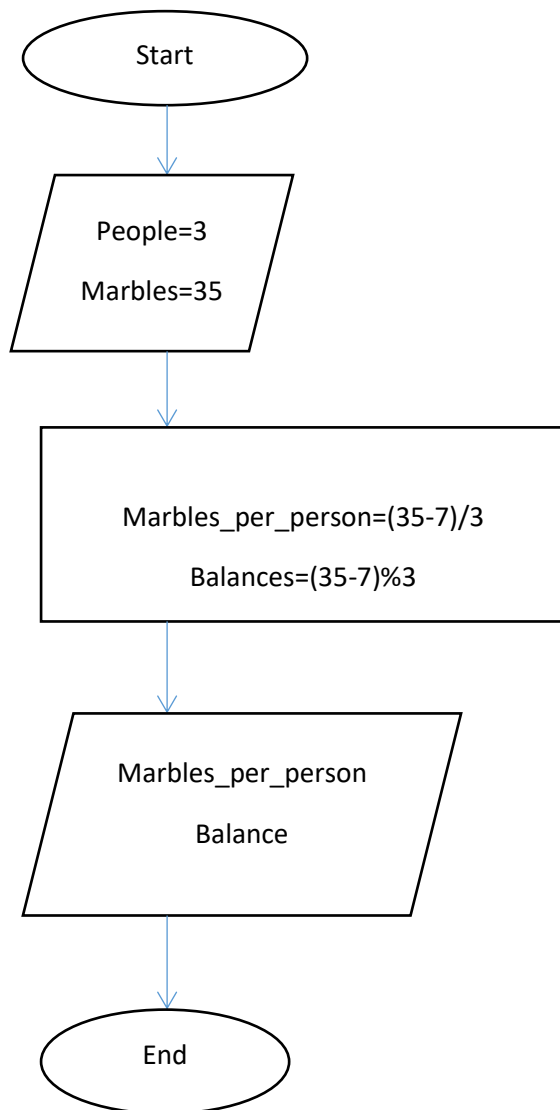

Balance=(35-7)%3

Marbles_per_person

Balance

End

FLOWCHART:

C++ PROGRAM:

```
#include <iostream>

using namespace std;

int main()
{
    int people=3;
    int marbles=35;
    int marbles_per_person;
    int balance;

    marbles_per_person=(marbles-7)/people;
    balance=(marbles-7)%people;

    cout<<"guli setiap orang dapat="<<marbles_per_person;
    cout<<"\n baki="<<balance;

    return 0;
}
```
