

SCENARIO

“

”

NAME	MATRIC NO	GROUP
IRDINA NADHIRAH BINTI BAHANUDDIN	22C18G026	2

PROBLEM:

Write a program that asks user to enter two integer, obtains the numbers from the user, then prints the larger number followed by the words “is larger”. If the numbers are equal, print the message “These numbers are equal”. A typical run of your program might look as follows:

SAMPLE OUTPUT:

Sample Output:

IPO CHART		
INPUT	PROCESS	OUTPUT
Number_1	if (Number_1>Number_2) Print_Number_1 is larger; else if (Number_1<Number_2) Print_Number_2 is larger; else if (Number_1=Number_2) Print_These_numbers_are_equal; else Print_Invalid_input;	Print_Larger_number
Number_2		Print_Numbers_equal

PSEUDOCODE:

Start

Prompt Number_1

Read Number_1

Prompt Number_2

Read Number_2

if (Number_1>Number_2)

 Print_Number_1 is larger;

else if (Number_1<Number_2)

 Print_Number_2 is larger;

else if (Number_1=Number_2)

 Print_These_numbers_are_equal;

else

 Print_Invalid_input;

Print_Larger_number

Print_Number_equal

End

FLOWCHART:

C++ PROGRAM:

```
#include <iostream>

using namespace std;

int main()
{
    int Number_1;
    int Number_2;

    cout<<"Please enter the first number = ";
    cin>>Number_1;

    cout<<"\nPlease enter the second number = ";
    cin>>Number_2;

    if (Number_1>Number_2)
        cout<<"\n"<<Number_1<<" is larger";
    else if (Number_1<Number_2)
        cout<<"\n"<<Number_2<<" is larger";
    else if (Number_1==Number_2)
        cout<<"\nThese numbers are equal";
    else
        cout<<"\nInvalid input!";

    return 0;
}
```
