

SCENARIO

“

”

NAME	MATRIC NO	GROUP
IRDINA NADHIRAH BINTI BAHANUDDIN	22C18G026	2

PROBLEM:

In Bantuan Khas Covid-19 (BKC) program, a user needs to enter the category and ‘isi rumah’ to check that eligibility to get the BKC.

You need to create a problem analysis, problem design and problem solution for the **Covid-19 Special Assistance Status Check**, shown in Table 1. The program must be able to show the amount of user get after they enter the requirement based on the category shown in Table 1. Your works should have these three:

- (i) **Problem analysis** should contain, input, process and output, and also have the early declaration of the variables.
- (ii) **Problem Design** should have Flowchart and Psedocode.
- (iii) **Problem Coding** to solve produce computer program with the appropriate output interface (with message) to the user.

Table 1

The screenshot shows the peMULih logo at the top, followed by the text 'Fokus Pertama: Meneruskan Agenda Prihatin Rakyat'. Below this is the title 'BANTUAN KHAS COVID-19 (BKC)'. A table is displayed with the following data:

Kategori Penerima	Kelayakan	
	Isi Rumah	Buaya
Miskin Tegar	RM1,300	RM500
B40	RM800	RM200
M40	RM250	RM100

SAMPLE OUTPUT:

Sample Output:
